1. Executive Summary

This report analyses **56,252 restaurant listings** from the Zomato Bangalore open dataset to uncover what drives customer ratings and where business opportunity lies for a food-discovery platform. The analysis covers data cleaning, nine visual explorations, and five actionable recommendations tailored for the Alfido Tech platform.

Location

BTM, Koramangala and Indiranagar are the top 3 zones — highest restaurant density and user activity in Bangalore.

Ratings

Mean rating is 3.70/5. Restaurants with online ordering (3.72) and table booking score noticeably higher.

Pricing

Avg cost INR 543 for two. Mid-range (INR 500-800) delivers the best ratings per rupee — the platform sweet spot.

Key Findings

- North Indian dominates in volume; niche cuisines (Modern Indian, Malaysian, Japanese) achieve the highest average ratings.
- Fine Dining and Casual Dining consistently outperform Quick Bites and Beverage Shops.
- Social proof confirmed — restaurants with more votes tend to have higher ratings ($r = 0.427$).
- Only 11.5% offer table booking, yet those that do rate significantly higher (4.13 vs 3.64) — a clear gap to exploit.

- Price and rating are positively correlated ($r = 0.331$); mid-range restaurants are the value sweet spot.

5 Recommendations for Alfido Tech

R1	Partner with niche high-rated cuisines	Modern Indian, Malaysian, Japanese — quality signals for early users
R2	Launch in BTM, Koramangala & Indiranagar	Highest density → faster supply growth & lower delivery cost
R3	Incentivise table-booking adoption	In-app reservation widget + partner listing badges
R4	Surface online-order-ready restaurants	Prioritise in discovery feed — 54% ready, rate higher
R5	Launch "Hidden Gems" content series	Mid-range (INR 500-800) high-rated spots — drives engagement
